

FINANCIAL PERFORMANCE & BUSINESS STORYTELLING REPORT

Project: FinSight Bank Financial Analytics Dashboard

Author: Bhavya Sri Kavuru | Power BI Data Analyst Associate (PL-300)

Tools Used: Power BI Desktop, DAX, Power Query, Star-Schema Modeling, Microsoft Excel

Dataset Scope: 50,070 Transaction Records across 5,000 Customers (FY 2023 – FY 2026)

1. Executive Summary

This report analyzes transaction volume trends, fee revenue performance, customer segmentation, and payment channel reliability for FinSight Bank. By establishing a star-schema model between transactional facts, customer dimensions, and a calendar date table, the analysis highlights performance bottlenecks, root causes for payment drop-offs, and clear strategic next steps to improve transaction success rates and average order values.

2. Key Performance Indicators (FY 2024 vs. FY 2025)

- **Gross Transaction Volume:** ₹142.8M (+1.41% YoY)
- **Total Transaction Count:** 21,480 (+2.72% YoY)
- **Average Transaction Value (ATV):** ₹6,648 (-1.26% YoY)
- **Platform Fee Revenue:** ₹311.9K (+4.60% YoY, average ₹14.52/transaction)
- **Transaction Success Rate:** 91.4% Success | 5.8% Failed | 2.8% Pending

3. Core Business Questions & Storytelling Insights

Q1: Did revenue growth meet operational expectations, and what drove volume changes?

- **Finding:** Annual transaction volume grew modestly (+1.41% YoY), while total transaction count expanded faster (+2.72%).
- **The "Why" (Root Cause):** Customers shifted toward high-frequency, smaller retail UPI payments (food delivery, fuel, recharges), reducing overall Average Transaction Value (ATV) by 1.26%.
- **Recommendation:** Introduce promotional loyalty points for high-ticket Net Banking transactions above ₹25,000 to recover ATV.

Q2: Which customer segments drive revenue, and where is volume concentrated?

- **Finding:** The Retail segment generates 58.2% of total transaction volume, followed by Corporate (21.4%), Premium (12.1%), SMEs (5.6%), and Wealth (2.7%).
- **The "Why" (Root Cause):** High retail volume generates high server load under low-margin statutory fee structures, while high-balance Corporate and Wealth segments remain underutilized.
- **Recommendation:** Expand B2B corporate payroll features and SME vendor-payment solutions to increase commercial segment share to 30%.

Q3: What is the financial and operational impact of transaction failures?

- **Finding:** A 5.8% transaction failure rate resulted in ₹8.28M in lost transaction volume and roughly ₹120K in uncaptured gateway fees.
- **The "Why" (Root Cause):** Power BI drillthrough revealed 64% of transaction drop-offs occurred during peak salary pay cycles (28th to 2nd of each month) due to gateway timeouts on mobile Net Banking.
- **Recommendation:** Implement automated gateway failovers during peak month-end periods to retain ~70% of dropped transactions.

Q4: How is financial volume distributed geographically?

- **Finding:** Maharashtra, Karnataka, and Gujarat generate 54.3% of the bank's total transaction volume across all 12 operational states.
- **The "Why" (Root Cause):** Merchant point-of-sale adoption and digital banking awareness are concentrated in top metro hubs (Mumbai, Bengaluru, Ahmedabad).
- **Recommendation:** Onboard regional retail merchant aggregators in secondary states like Andhra Pradesh and Delhi NCR to diversify geographic exposure.

4. Technical Implementation & Data Modeling

- **Star Schema Relationship:** Linked Fact_FinanceTransactions (50,070 rows) to Dim_Customers (5,000 rows) via Customer_ID using a 1-to-Many relationship, and to Dim_Calendar via Transaction_Date.
- **Power Query ETL:** Removed duplicate transaction IDs, trimmed whitespace on text fields, converted negative amounts via absolute values, and imputed missing fee amounts with the dataset mean (₹14.52).
- **Primary DAX Calculations:**
 - Total Volume: Total Amount =
SUM(Fact_FinanceTransactions[Amount])

- Prior Year Benchmark: Previous Year Amount = CALCULATE([Total Amount], SAMEPERIODLASTYEAR(Dim_Calendar[Date]))
- Growth Variance: YoY Amount % = DIVIDE([Total Amount] - [Previous Year Amount], [Previous Year Amount], BLANK())

5. Prioritized Action Plan

1. **Fix Gateway Infrastructure:** Implement dynamic payment routing during month-end traffic spikes to reduce failed transactions by 3 percentage points.
2. **Grow Commercial Banking:** Package integrated vendor payment APIs for SME and Corporate accounts to boost recurring fee income.
3. **Expand Tier-2 Footprint:** Partner with local merchant aggregators in emerging states to lower dependency on top 3 metro states.
